

What is Cloud Computing?

Cloud Computing is using a computer or smart phone to connect to a virtual network where you have access to all of your documents, pictures, videos and media, allowing you to access and manipulate those files all through an internet browser.

If your laptop was stolen or destroyed, how would that affect your business? Could you still function without access to your files?

Do you want access to your email, documents and calendar on your mobile device? Would you like to access and edit your documents real time online?

Do you want reduce your dependency on your IT infrastructure? Would you like to get rid of your email and document servers?

Do you want to simplify your workflow? Do you want your IT solution to work for you?

If you answered yes to any of these questions, then Klean PC's Klean Kloud is the solution you have been looking for.

- *Access and edit your documents from any computer.*
- *Have complete access to your cloud from your mobile device.*
- *Remove your dependency on IT Infrastructure.*
- *Streamline and Simplify your workflow.*
